QRT Breakdown Management — User Story Document

1. Overview

This document holds 36 user stories, QRT-001 to QRT-036. Each story is written in business terms and states what is already working in Full UAT and what is still to be delivered.

An earlier epic table used different story numbers from Q8 onward and referred to stories that were never written. Those numbers are retired. This document uses QRT-001 to QRT-038 only, and every cross-reference points to the story headings below.

Process at a glance

1. An unscheduled breakdown case is logged. The India CV breakdown entitlement is applied and the stage is Pending.
2. Routing looks for an eligible hub within the configured distance. If found, the case is Hub Assigned and an accept window starts. If not, the case goes to the contact-centre queue as Pending.
3. If the hub accept window is missed, the next nearest hub is tried, up to the maximum attempts. After that, the case goes to the contact centre.
4. The Hub SPOC or the CCA assigns a technician; the case is Assigned. A CCA assignment stops hub hopping.
5. The assignment is accepted; the case is Accepted and the service appointment is created.
6. The appointment reaches Job Start and the breakdown job card is created. Started alone does not create it.
7. Milestone times are recorded on the case as the appointment status changes.
8. The CCA can cancel the case with a mandatory reason while no job card is in progress.
9. Completing or cancelling the job card closes or cancels the case and appointment.

2. Personas

Ten personas act on a QRT case; the contact centre, Hub SPOC and technician carry most of the journey.

Persona	Role in the QRT process
Contact centre / CCA	Logs cases, owns cases no hub can cover,

Persona	Role in the QRT process
	assigns mobility technicians, sets the breakdown location, cancels and reassigns cases
Hub SPOC (hub coordinator)	Owns a case once the hub is assigned; picks a technician at the hub or its linked dealers
QRT technician	Accepts the job, attends the vehicle, starts and closes the job card
QRT admin	Maintains hubs, hub–dealer links, LOB and BD Type lists
System	Automated routing, hub hopping, time recording, FleetEdge intake

3. User stories

Epic Q1 — Log the breakdown

QRT-001 Log an unscheduled breakdown case

Persona **Contact centre / CCA** | Status **Built**

> *As a CCA, I want a dedicated unscheduled-breakdown case to start Quick Response so that only this case type follows hub, contact-centre and technician assignment.*

Acceptance criteria — built

1. The case can be registered from contact centre portal
2. The CCA can set the breakdown location from a map
3. Technician assignment and acceptance apply only to unscheduled breakdown cases.

Future enhancement

1. BD Type is selected from a governed list supplied by the business. (T2 — Open, list awaited from Vishwanath Nadagir)

QRT-002 Fill vehicle and warranty from the asset

Persona **Contact centre / CCA** | Status **Built**

> *As a CCA, I want the case to pick up chassis and warranty from the vehicle so that I do not re-type vehicle details.*

Acceptance criteria — built

1. When the vehicle is set on the case, the vehicle, customer, contact, chassis number, line of business (LOB), product line and warranty details are filled in automatically, on create and on later updates.

2. Driver details and free-text breakdown details are need to be inputted during creation of case.

QRT-003 Start India CV breakdown entitlement on case accepted

Persona **QRT technician(Mobility)** | Status **Built**

> *As service operations, I want the India CV breakdown entitlement to apply as soon as the case is accepted so that the Pending clock starts from accept time.*

Acceptance criteria — built

1. On accept, the India CV breakdown entitlement is applied if the case does not already have one, and the stage starts as Pending.
2. An existing entitlement is never duplicated or replaced by a second one.

Epic Q2 — Route to a hub or the contact centre

QRT-004 Give the case to the nearest active hub

Persona **System** | Status **Built**

> *As the system, I want a nearby active hub with a coordinator and a matching line of business to own the case so that the closest QRT hub can take the breakdown.*

Acceptance criteria — built

1. With a location on the case, routing looks for an active hub within the configured distance that has a hub coordinator and, where LOB is set, a linked dealer for that LOB.
2. The hub coordinator becomes the owner, status becomes Hub Assigned and the hub accept window starts.
3. An admin can change the maximum auto-assignment distance without a release. The value is a whole number of kilometres from 1 to 9,999.
4. If no eligible hub, then the case assigned to the nearest technician. It should be tried two times

QRT-005 Give the case to the contact centre if no hub fits

Persona **Contact centre / CCA** | Status **Built**

> *As a CCA, I want the case to sit in the contact-centre queue as Pending when no eligible hub is found so that a mobility technician is not auto-assigned on the first missed hub.*

Acceptance criteria — built

1. If no eligible hub or technician is found, the case goes to the contact-centre assignment queue with status Pending.
2. Missing the first hub does not, by itself, auto-assign a mobility technician or create the service appointment.

QRT-006 Move to the next hub if the current hub does not assign in time

Persona **System** | Status **Built**

> *As the system, I want ownership to move to the next nearest hub when the accept window is missed so that the case does not stall on one hub.*

Acceptance criteria — built

1. If the hub accept window expires without a technician, the next nearest hub coordinator is tried and a new window starts.
2. After the configured maximum number of hub attempts, the case goes to the contact centre as Pending, not to mobility auto-assignment.
3. Once the CCA assigns a technician, hub hopping and mobility auto-assignment stop

Epic Q3 — Assign a technician

QRT-007 Hub coordinator assigns a technician

Persona **Hub SPOC** | Status **Built**

> *As a Hub SPOC, I want to choose an available QRT technician at my hub or its linked dealers so that the case is Assigned and the accept clock starts.*

Acceptance criteria — built

1. The list shows QRT technicians stationed at the hub and at dealers linked to the hub.
2. Hub location records are never offered as technicians.
3. Assigning sets the technician and status Assigned. The service appointment is created only after the case is Accepted.
4. The technician list shows the LOB of each technician in a table.

QRT-008 Contact centre sees mobility technicians, including ones already tried

Persona **Contact centre / CCA** | Status **Built**

> *As a CCA, I want nearby mobility technicians for the case location, with people already tried on this case marked, so that I can assign someone without repeating failed attempts.*

Acceptance criteria — built

1. The list comes from the mobility network for the case location.
2. Technicians not yet tried come first. Technicians already tried on this case are labelled and listed last.
3. A case that is already Accepted cannot be reassigned from this screen.

QRT-009 Contact-centre assignment is not bounced by hub hopping

Persona **Contact centre / CCA** | Status **Built**

> *As a CCA, I want a case I assigned to stay with that assignment so that hub hopping does not pull it away.*

Acceptance criteria — built

1. When the CCA assigns a technician, hub hopping and mobility auto-assignment stop, and the case stays with the contact-centre assignment queue.
2. The service appointment is still created only when the case is Accepted.

Epic Q4 — Accept and create the field appointment

QRT-010 Create the service appointment when the case is accepted

Persona **Hub SPOC** | Status **Built**

> *As a QRT technician or Hub SPOC, I want a breakdown service appointment and technician booking once the assignment is accepted so that field work has an appointment without creating one at assign time.*

Acceptance criteria — built

1. The service appointment and the technician booking are created only when the case status is Accepted. An existing appointment is reused.
2. Creating the appointment when the case is logged or when the location changes is no longer used.
3. The assignment screens tell the user that the appointment is created on accept. (Mobile)
4. After accept, case ownership can move to expert advice. The entitlement Pending stage completes on a real accept, not on automatic retry attempts.

QRT-011 Keep the appointment tied to the case and record travel times

Persona **System** | Status **Built**

> *As the system, I want the appointment linked to the breakdown case and trip times stored on each status change so that dispatch and clocks stay aligned.*

Acceptance criteria — built

1. Quick Response appointments stay linked to their breakdown case.
2. When the appointment status changes, the case records the time it was Assigned, Started, Reached, reached Job Start and Completed.

QRT-012 Hand the case to towing when towing is requested

Persona **System** | Status **Built**

> *As the system, I want ownership to move to the towed-request queue when towing is initiated so that towing is not left under expert advice.*

Acceptance criteria — built

1. A towed-request queue exists, and the appointment map can show towed cases.

Epic Q5 — Breakdown job card

QRT-013 Open a breakdown job card when the appointment reaches Job Start

Persona **QRT technician(Mobility)** | Status **Built**

> *As a QRT technician, I want a breakdown job card when the appointment reaches Job Start so that on-site work has a job card linked to the breakdown.*

Acceptance criteria — built

1. When the breakdown appointment reaches Job Start, one breakdown job card is created. “In Progress” is treated the same as Job Start.
2. Started does not create the job card.
3. Only breakdown appointments create this job card, and a second job card is never created when one already exists.
4. Service type, LOB and Promise TAT are carried from the case to the job card.

QRT-014 Job card closure or cancellation closes or cancels the case and appointment

Persona **QRT technician** | Status **Built**

> *As a QRT technician, I want the case and appointment to follow the job card when I complete or cancel it so that the breakdown request does not stay open.*

Acceptance criteria — built

1. When the job card is Completed (no towing) or Closed (with towing), its end time is recorded
2. Cancelling the breakdown job card cancels the case and the appointment.

Epic Q6 — Cancel and location

QRT-015 Cancel the breakdown and release the technician

Persona **Contact centre / CCA** | Status **Built**

> *As a CCA, I want to cancel the breakdown through the Quick Response cancel path so that the service request is cancelled and the technician is released.*

Acceptance criteria — built

1. The CCA cancels through the Quick Response cancel action for unscheduled breakdowns.
2. Cancel is blocked while a job card is in progress.
3. Cancel sets a distinct Cancelled status on the case.
4. A cancellation reason is mandatory and is recorded on the case.
5. Related service appointments are cancelled with the case.
6. The cancel action can raise a follow-up case for the CCA assignment queue.

Epic Q7 — Mobility integration

QRT-016 Keep mobility in step with the case and technician

Persona **Mobility / System** | Status **Built**

> *As the system, I want new breakdown cases (except FleetEdge ones) and technician changes sent to the mobility network so that the field app matches the case.*

QRT-017 Keep each hub aligned with a hub service resource

Persona **QRT admin** | Status **Built**

> *As a QRT admin, I want every QRT hub location to have a matching hub service resource so that hubs can be used in routing and assignment.*

Acceptance criteria — built

1. Creating or updating a QRT hub location creates or updates a matching service resource of type QRT Hub, and the hub is linked to it.
2. Hub and service resource automatically sync to mobility

QRT-018 Link dealers to hubs so routing knows who belongs where

Persona **QRT admin** | Status **Built**

> *As a QRT admin, I want each hub to list its dealers, including one primary dealer, so that routing can match the LOB to the right dealers.*

Acceptance criteria — built

1. Each hub–dealer link is unique, so the same dealer cannot be linked twice to the same hub.
2. Marking a dealer as primary sets it as the hub's master workshop and removes the primary flag from the hub's other dealers.

Epic Q8 — Milestones and SLA tracking

QRT-019 See status times for the breakdown appointment

Persona **Hub SPOC** | Status **Built**

> *As a Hub SPOC, I want to see when the appointment status changed so that I can follow the job without guessing times.*

Acceptance criteria — built

1. The case stores the Assigned, Reached, Started, Job Start and Completed times from the appointment.

QRT-020 Show milestone timestamps and elapsed time against target

Persona **Contact centre / CCA** | Status **Built**

> *As a contact centre user, I want each milestone's actual time and elapsed duration against target so that I can see where a breakdown is losing time.*

Acceptance criteria — built

1. The case holds the Pending, Assigned, Reached, Started, Job Start and Completed times, plus the Reach time, Start time and Resolution time durations.
2. Milestones update automatically when the appointment status changes, including catch-up after a later status.
3. Started and Completed times are recorded.
4. The case carries a non-conformance indicator and a resolution non-conformance indicator. The 24-hour measures use the job card end time (QRT-014).

QRT-021 Colour-code conforming and non-conforming milestones

Persona **Contact centre / CCA** | Status **Built**

> *As a CSM or TMCV user, I want milestones coloured by conformance to target so that breaches stand out without reading every time.*

QRT-022 Show Reach and Resolution confirmation to the CCA

Persona **Contact centre / CCA** | Status **Built**

> *As a CCA, I want to see whether Reach and Resolution were confirmed so that I can tell the customer the technician has arrived or the vehicle is fixed.*

Acceptance criteria — built

1. The case can already hold the Reach confirmation, the Job Completed confirmation and whether a confirmation code exists.

Epic Q9 — Collaboration and alerts

QRT-023 Prominent case feed, titled comments and live refresh

Persona **QRT admin** | Status **Built**

> *As a CSM or TMCV user, I want a prominent feed on the case where I can comment, with titled comments and a page that stays current, so that all communication on a breakdown is in one place and I never act on stale data.*

QRT-024 Identify the case in alert subject lines

Persona **Hub SPOC** | Status **Built**

> *As a Hub SPOC, I want alert subjects to name the case and vehicle so that I can act without opening each alert.*

Epic Q10 — Map, location and field evidence

QRT-025 Set the breakdown location on a map

Persona **Contact centre / CCA** | Status **Built**

> *As a CCA, I want to set and correct the breakdown location on a map so that routing starts from the right place.*

Acceptance criteria — built

1. The CCA can find the location by address search (Google Places) or by dropping a pin on a Google map and save it to the case.

QRT-026 Auto-fetch location for FleetEdge vehicles

Persona **System** | Status **Built**

> *As the system, I want the breakdown location fetched from FleetEdge so that the CCA does not have to ask the driver.*

Acceptance criteria — built

1. For a FleetEdge breakdown, latitude, longitude, odometer and registration are fetched using the chassis number.

QRT-027 See photographs captured by the QRT technician

Persona **Contact centre / CCA** | Status **Built**

> *As a CCA or CSM, I want thumbnails of photographs taken by the technician on the case so that I can verify the work without calling the field.*

Epic Q11 — Reassignment, masters and access

QRT-028 Reassign a case to another workshop or technician

Persona **Contact centre / CCA** | Status **Built**

> *As a CCA, I want to reassign a case to another workshop or technician, with a reason, so that cases raised against inactive divisions or stuck technicians still get served.*

Acceptance criteria — built

1. An Accepted case cannot be reassigned from the CCA assignment screen.

QRT-029 Works Manager maintains hub and QRT technician records

Persona **QRT Admin** | Status **Built**

> *As a QRT Admin, I want to create and maintain my dealer's hubs and QRT technicians so that the master data sits with the person accountable for it.*

QRT-034 Technician lifecycle states and assignment exclusion

Persona **QRT Admin** | Status **Built**

> *As a QRT Admin, I want to mark a technician Out of Service, Inactive or Terminated so that unavailable people are never assigned.*

QRT-035 Technician master list with status and download

Persona **Contact centre / CCA** | Status **Built**

> *As a CCA, I want a full technician master list with status and key details that I can download so that I can check coverage outside the assignment screen.*

Epic Q12 — Reporting, data and FleetEdge

QRT-036 Standard reports, supervisory dashboard and complete data

Persona **QRT Admin** | Status **Built**

> *As a QRT admin, I want standard reports and one consolidated dashboard covering every breakdown so that I can monitor volumes, SLA conformance and hub performance.*
