Technical Campaign — User Story Document

1. Overview

This document holds 35 user stories, TEC-001 to TEC-035, under the six topics of the Retro Campaign deck for Technical Campaign (retrofit) at dealer workshops. Each story is written in business terms with its acceptance criteria.

The stories are classified under the topics of the Retro Campaign deck: Campaign Administration (TML), CP Parts Ordering, Service Advisor Opening Job Card, Campaign Attachment, Service Advisor Closing Job Card, and If Campaign Is Not Done. Story numbers TEC-001 to TEC-035 are unchanged, so they appear out of numeric order within a topic; every cross-reference points to the story headings below.

Process at a glance

1. Campaign operations (TML) defines the campaign, the campaign item type, the BOM with fail, job and complaint codes, and the dealer allocations. Chassis are loaded by template or added one at a time, and quota can be moved between dealers within a fixed total.
2. The Service Advisor saves a service-request job card. The open campaign is linked, and every open campaign on the chassis adds its BOM lines with their codes and billing type Warranty.
3. Parts are issued (Shipped). Labour-only lines need a file (ECU image or screenshot) before they can be shipped.
4. Before closing, the advisor records the visit outcome: Completed, or Not Completed with a reason. The job card cannot close without an outcome.
5. When the job card is invoiced and the work is proven, the campaign item becomes Retrofitment Completed and campaign completion % updates.
6. An unfinished campaign is offered again on the next job card for that chassis, at any workshop.
7. The Spare Store Manager orders campaign parts on the SAP retrofit order with the campaign selected, up to remaining allocation; parts off the BOM or over allocation are blocked.

2. Personas

Three personas use the pack. The walkthrough uses Murli for the job card and Pankaj Yadav for the parts order.

Persona	Role in Technical Campaign
Dealer Service Advisor (walkthrough: Murli)	Saves the service-request job card, sees the campaigns, issues parts, uploads labour evidence, records the visit outcome, closes the job card
Dealer Spare Store Manager (walkthrough: Pankaj Yadav)	Orders campaign parts on the SAP purchase order up to remaining allocation
Campaign operations (TML)	Defines campaigns, type, BOM codes and quota; loads chassis and allocations; moves quantity between dealers; runs reports; runs the master switch

3. User stories by topic

Topic 1 — Campaign Administration (TML)

TEC-001 Campaign Creation and enrolment per vehicle per campaign

Persona **NTSM team** | Status **Built**

> *As NTSM team, I should be able to create campaign and want each campaign and vehicle combination to be unique so that the same chassis is not enrolled twice on the same campaign.*

Acceptance criteria

1. User should be able to create technical campaign record and create campaign items.
2. Bulk chassis upload and single-chassis add respect the enrolment key.

TEC-002 Download and upload templates for campaign items and allocations

Persona **NTSM team** | Status **Built**

> *As NTSM team, I want to download a template and upload it back for campaign items and parts allocation so that tens of thousands of chassis and allocations load without manual entry.*

Acceptance criteria

1. Campaign items and campaign parts allocation each offer template download and upload.
2. A bulk chassis upload (Excel) creates the campaign items automatically and respects the enrolment key.
3. The allocation template has only dealer, part and allocated quantity. Ordered, received and consumed quantities, order and receipt status, movement type and receipt date are left out.

4. One upload handles 30,000 to 40,000 records.
5. The upload reports which rows loaded and which failed, and why (whether a failed row rejects the whole file is to be confirmed).

TEC-003 Add one missed chassis to a campaign

Persona **NTSM team** | Status **Built**

> *As NTSM team, I want to search for a single chassis and add it to the campaign so that a missed vehicle can be enrolled without a file.*

Acceptance criteria

1. Search-and-add finds one chassis at a time and creates its campaign item. It is not a list selection.
2. The enrolment key stops the same chassis being added twice to the same campaign.

TEC-004 Fail, job and complaint codes on the BOM item

Persona **NTSM team** | Status **Built**

> *As NTSM team, I want fail, job and complaint codes on each campaign BOM item so that every job card line carries the right codes for its part.*

Acceptance criteria

1. Each campaign BOM item holds a fail code, a job code and a complaint code.
2. Job card lines created from a BOM item receive that item's three codes.
3. A campaign line with a blank fail, job line items or complaint code is rejected.

Topic 2 — CP Parts Ordering

Deck points covered

- SAP Order – Parts Addition

Dealers order campaign parts on an existing SAP purchase order. Remaining quantity is allocated quantity minus ordered quantity. Ordered quantity counts only lines on orders that are not cancelled.

TEC-005 Add campaign BOM parts to the existing parts order

Persona **Spare Store Manager** | Status **Built**

> *As a Spare Store Manager, I want to order campaign parts up to my dealer's remaining allocation on the existing SAP purchase order so that allocation is used and the lines are recognised as campaign parts.*

Acceptance criteria

1. Retrofit BOM Items on the order lists, campaign parts that have a dealer allocation.
2. Orders placed through Place Order also pass the BOM and allocation check.

TEC-006 Do not allow order quantity above allocated

Persona **Spare Store Manager** | Status **Built**

> *As a Spare Store Manager, I want the system to reject a campaign order line that would exceed the allocation so that outlets cannot order more than they were given.*

Acceptance criteria

1. For an order line linked to an allocation, its quantity plus other lines on non-cancelled orders for the same allocation cannot exceed the allocated quantity.
2. The check applies to SAP purchase order lines linked to an allocation and is checked on every save.

TEC-007 Campaign on the SAP retrofit order

Persona **Spare Store Manager** | Status **Built**

> *As a Spare Store Manager, I want to pick the campaign on a SAP retrofit order so that only that campaign's parts are offered.*

Acceptance criteria

1. User will get an option to select the campaign, based on that parts will be auto added in the SAP order creation screen

Topic 3 — Service Advisor Opening Job Card

Deck points covered

- Job card line items should inherit the codes
- Job card line items should get auto created (billing type = Retro Warranty)
- Technical Campaign Information at the Job card level

Dealers use a normal service-request job card; a dedicated campaign-retrofit job card type is not used. Matching uses the vehicle on the job card, otherwise the vehicle on the asset. An open campaign item that is visible to dealers and inside the campaign dates is eligible. The job card header holds one campaign; the job card lines hold every open campaign.

TEC-008 Add campaign spare parts after the job card is linked

Persona **Dealer Service Advisor** | Status **Built**

> *As a Dealer Service Advisor, I want the campaign bill of materials to appear as job card lines once the campaign is linked so that the workshop has the retrofit parts list without typing it.*

Acceptance criteria

1. Spare-part lines are created automatically.
2. Each line holds its own campaign and campaign item.
3. Each line carries the fail, complaint and job codes of its BOM item.
4. Billing type on the line is Retro Warranty.
5. Existing job card parts handling works on these lines as normal.

TEC-009 Add lines for every open campaign on the chassis

Persona **Dealer Service Advisor** | Status **Built**

> *As a Dealer Service Advisor, I want every open campaign on the chassis to add its own lines so that no campaign is missed when a vehicle is on more than one.*

Acceptance criteria

1. One line is created for each qualifying BOM item of every open, dealer-visible, in-date campaign item on the vehicle.
2. Each line points to its own campaign and campaign item and carries that BOM item's codes.
3. The job card header still holds one preferred campaign.

TEC-010 See and confirm the campaign from the job card screen

Persona **Dealer Service Advisor** | Status **Built**

> *As a Dealer Service Advisor, I want to see the campaigns on the job card and the codes for the one I select so that I can check the chassis campaign before work starts.*

Acceptance criteria

1. At the job card level, we have a tab, which shows the associated campaign and the instructions

Topic 4 — Campaign Attachment

Deck points covered

- ECU Image / Screenshot to be made mandatory for Labour only Campaigns – example ECU Flashing

TEC-011 Labour-only lines need a file before Shipped

Persona **Dealer Service Advisor** | Status **Built**

> *As a Dealer Service Advisor, I want a labour-only campaign line to need a file before it can be shipped so that work like ECU flashing has proof.*

Acceptance criteria

1. A line whose campaign item is Labour Only cannot move to Shipped, Partially Shipped or External Shipped unless a file is uploaded on that line.
2. The message reads: "A file must be uploaded on this Job Card line before Shipped status. This Product Service Campaign Item is Labour Only."
3. Labour and Parts lines are not blocked for a missing file; the issued part is the proof.
4. The expected evidence is an ECU image or screenshot.

Topic 5 — Service Advisor Closing Job Card

Deck points covered

- Job card can't be closed until the Campaign item (with vehicle tagged to dealer) is completed
- Campaign item will be closed when all the Job card items status moves to Shipped
- Campaign Visit Outcome / Campaign Non-Completion Reason for Job card closure

TEC-012 Job card close needs a retrofit outcome

Persona **Dealer Service Advisor** | Status **Built**

> *As a Dealer Service Advisor, I want to record whether the retrofit was done before closing so that every campaign visit has an outcome.*

Acceptance criteria

1. The advisor can record the visit outcome on the job card, and a non-completion reason when the outcome is Not Completed.
2. The screen states that closing the job card does not complete the campaign item.
3. Not Completed needs a reason: Part not available; Rejected by customer; Procedure not clear.
4. Once a valid outcome (and reason, where needed) is recorded, the job card can close.

TEC-013 Retro fitment Completed only when the work is proven and invoiced Retro inventory (Refer PPI)

Persona **NTSM Team** | Status **Built**

> *As Campaign operations, I want the campaign item marked Retro fitment Completed only when the work is proven and the job card is invoiced so that campaign progress reflects finished, billed retrofits.*

Acceptance criteria

1. Shipping a line does not complete the campaign item.
2. The job card campaign screen tells the advisor that Retro fitment Completed is set at invoicing unless the visit is Not Completed.
3. Parts campaigns: every campaign line for that campaign item is Shipped (part scanned or stacked).
4. Labour-only campaigns: the line has both the file and the job code.
5. Retro fitment Completed is set only when the job card reaches invoicing.
6. A Completed visit outcome alone does not complete the item while lines are still open.
7. A Not Completed outcome never completes the item.

TEC-014 Closing the job card is not blocked by the campaign (interim)

Persona **Dealer Service Advisor** | Status **Built**

> *As a Dealer Service Advisor, I can close the job card while the campaign close rule is not yet switched on.*

Acceptance criteria

1. Closing the job card is not blocked by the retrofit outcome or by unshipped campaign lines.

TEC-015 Complete the campaign item when the first spare is shipped or paid

Persona **Dealer Service Advisor** | Status **Built**

> *As a Dealer Service Advisor, I wanted the campaign item to show Retro fitment Completed when the first campaign part was issued.*

Current behaviour

1. I want to see the campaign and campaign item status as *Retro fitment Completed when WOLI is shipped.*

Topic 6 — If Campaign Is Not Done

Deck points covered

- Above will repeat for the same chassis in next service

TEC-016 An unfinished campaign is offered again at the next visit

Persona **Dealer Service Advisor** | Status **Built**

> *As a Dealer Service Advisor, I want a campaign left unfinished to come back on the next job card for that chassis so that the retrofit is not forgotten.*

Acceptance criteria

1. Linking and line creation pick up campaign items that are not Completed, Closed, Cancelled or Cannot Complete.
2. A Not Completed visit does not complete the item, so the next job card for that chassis, at any workshop, links the same campaign again.
3. Job card line items will get auto created and campaign details will auto show up.
